

PJOTRS OSNOVSKIS (Pete Osnovsky)

Junior Full Stack Web Application Developer

Why me?

I totally understand, that lack of work experience is not helping here, but you got to start somewhere. I learned a lot and keep learning every day, in my opinion - dedication and consistency is the key. I may not have experience in programming, but I have some experience in life that taught me a lot. I'm hard-working, disciplined and stress tolerant individual, who gets things done and won't ask "why?" and talk a lot when given a task. I'm positive at work no matter what, as I keep personal life and work separated. I will be a great addition to your team even though I will have to learn a lot, a good challenge is a great motivator.

Previous Experience

I have over 10 years of management experience in the catering industry across a variety of restaurants in different parts of the UK. This experience taught me discipline, dedication and teamwork. Over the years I have developed strong skills in leadership, management, strategy and planning.

You might've noticed that lately I work as HGV driver, that happened when my little boy was born, and it was time to change from late night job to daytime. Now, it's time to start something I always dreamed about.

I am after a career change, as I want to do what I was always excited and passionate about, but never had the courage to dive in.

I am looking for a place where I can learn and develop as a professional, gain new knowledge, grow, face new challenges, meet new exciting people and find my path in the code.

Key Competences

I've started my coding journey in September 2018 with an Udemy Ruby and Ruby on Rails course. It included HTML5, CSS3, Bootstrap 4 and MySQL. Learned more material on SQL at W3Schools. Whole Udemy Course was finished by November 2019. Later, I found my opportunity at Code Institute, a 52-week full-stack web app developer course. Learning more HTML5, CSS3 and Bootstrap 5. Adding JavaScript, jQuery, Python, Flask, Django, MongoDB and more to my stack. The course will be finished and diploma granted by March 2022. Meanwhile, I've started Stanford University Programming Methodology (CS106A) online course and will expand my knowledge and experience further on.

Most Recent Projects

Recipe App. Work with Flask, jinja2 templates and MongoDB.
Technologies used: HTML, CSS, JS, Python, Flask, MongoDB.
GitHub: <https://github.com/pjotrs-osnovskis/recipe-app-ms3-po>
URL: <https://recipe-app-ms3-po.herokuapp.com/>

Movies App. Work with API and a little of JS.
Technologies used: HTML, CSS, JS, TMDB API (REST API).
