

PJOTRS OSNOVSKIS (Pete Osnovsky)

Junior Full Stack Web Application Developer

Key Competences

I've started my coding journey in September 2018 with an Udemy Ruby and Ruby on Rails course. It included HTML5, CSS3, Bootstrap 4 and MySQL. Learned more material on SQL at W3Schools. Whole Udemy Course was finished by November 2019. Later, I found my opportunity at Code Institute, a 52-week full-stack web app developer course. Learning more HTML5, CSS3 and Bootstrap 5. Adding JavaScript, jQuery, Python, Flask, Django, MongoDB and more to my stack. The course will be finished and diploma granted by March 2022. Meanwhile, I've started Stanford University Programming Methodology (CS106A) online course and will expand my knowledge and experience further on.

Previous Experience

I have over 10 years of experience as a general manager in the catering industry across a variety of restaurants in different parts of the UK. This experience taught me discipline, dedication and teamwork. Over the years I have developed strong skills in leadership, management, strategy and planning.

I am after a career change, as I want to do what I was always excited and passionate about, but never had the courage to dive in.

I am looking for a place where I can learn and develop as a professional, gain new knowledge, grow, face new challenges, meet new exciting people and find my path in the code.

Projects Developed

Movies App. Helps finding something to watch.

Technologies used: HTML, CSS, JS, EmailJS, TMDB API.
